THE GOT-URSIX CODEX

A Grossly Over-Explained Field Manual of War Signs, Cups, Fated Days and Other Things the Stars Never Asked For

As dictated by Col Got-ursix, Keeper of the Moons & Cauldrons
Transcribed (and reluctantly fact-checked) by Pip, Paperwork Division

LeonLink Press · leonlink.net/moons.html · First Muster Edition, 2026

For entertainment only. No horoscopes were harmed. Several were mildly embarrassed.

Contents

1. Foreword: A Salute Before We Begin

2. In the Beginning: The Codex and the Firmament

3. The Ancient Arts We Politely Borrowed Nothing From

4. The Twelve War Signs

5. The Element Compass and the Polar Opposites

6. The Cups: Where Two Signs Mesh

7. Star Rank: The Arithmetic of Destiny

8. Age Matters: The Seven Life Stages

9. Holy Days, Fated Days and Trickster Dates

10. Guiding Stars, Patron Heroes and Hidden Mechanics

11. Success, Failure and the Profile Card

12. The Theories (Peer-Reviewed by One Cat)

13. Field Notes from the LeonLink Front

14. The Last Book: Disclaimer and Truths

1. Foreword: A Salute Before We Begin

Recruit. You have opened a book. This already puts you ahead of 61% of the population, a statistic I invented just now, which is how most statistics in this field are made. Stand at ease.

I am Col Got-ursix. I have served in twelve ancient wars, eleven of which were real and one of which was a disagreement about the thermostat. I have read the stars, and frankly the stars have read me back. What follows is the Codex: a complete system of fate that owes nothing to Babylon, nothing to Pythagoras, and nothing to the newspaper horoscope that told you Tuesday would be "transformative" when in fact you only bought socks.

Other systems explain themselves briefly and mysteriously. The Codex explains itself **at length, with charts**, because nothing builds authority like a table. If you feel the explanation is excessive, remember: that is the point. Mystery is cheap. Over-explanation is premium.

> *Signed, with the customary 23-gun salute (budget allowed for one),*
> ***Col Got-ursix***

2. In the Beginning: The Codex and the Firmament

Every great system needs an origin story, and the Codex chose the oldest one in the library. In the opening of Genesis the Maker sets lights in the firmament "for signs, and for seasons, and for days, and years." Notice the order. Days are named before years. The Codex takes this as its first clue: **the day is the unit of destiny**, not the month the zodiac salesmen prefer.

The Chronicle of the Ancient Wars tells it like this. On the first morning there was light, and on the first morning there was also, inevitably, a sergeant asking who left the light on. The days of the month were handed out in order, one through thirty-one, each to a camp. Some camps received three days, some two, and Ashcrown, being Fire and therefore insistent, took four. When the Maker rested on the seventh day, the Galeborn (days 7–8) considered this a personal endorsement and have been insufferable about naps ever since.

The Codex takes a respectful position on creation: it holds that the world was made with order and intent, and that order is exactly why a person can build a playful system of signs at all. Patterns exist because Someone put them there. Whether the stars *govern* you is a different question, and the Codex, unlike certain magazines, gives you a straight answer in Chapter 14.

> *"The heavens declare the glory of God; the skies proclaim the work of His hands." (Psalm 19:1). Note that the heavens declare glory, not your compatibility with a Gemini. The Col finds this deeply reassuring.*

The irony we admit up front: the same ancient scriptures that open with stars as signs also warn people away from divination (Deuteronomy 18:10). The Codex resolves this tension the way the Col resolves every tension: by being a game. You may salute the stars. You may not take their orders.

3. The Ancient Arts We Politely Borrowed Nothing From

To appreciate how original the Codex is, one must tour the competition, briefly and with a raised eyebrow.

Astrology began in Mesopotamia, where Babylonian priests watched planets wander and concluded they must be sending memos. By the time the Greeks finished, there were twelve signs keyed to constellations the sun no longer even sits in on the advertised dates, thanks to the slow wobble of the Earth's axis called precession. Astrology has been running about one sign behind for two thousand years. The Codex finds this relatable; the Col's wall calendar still says 1987.

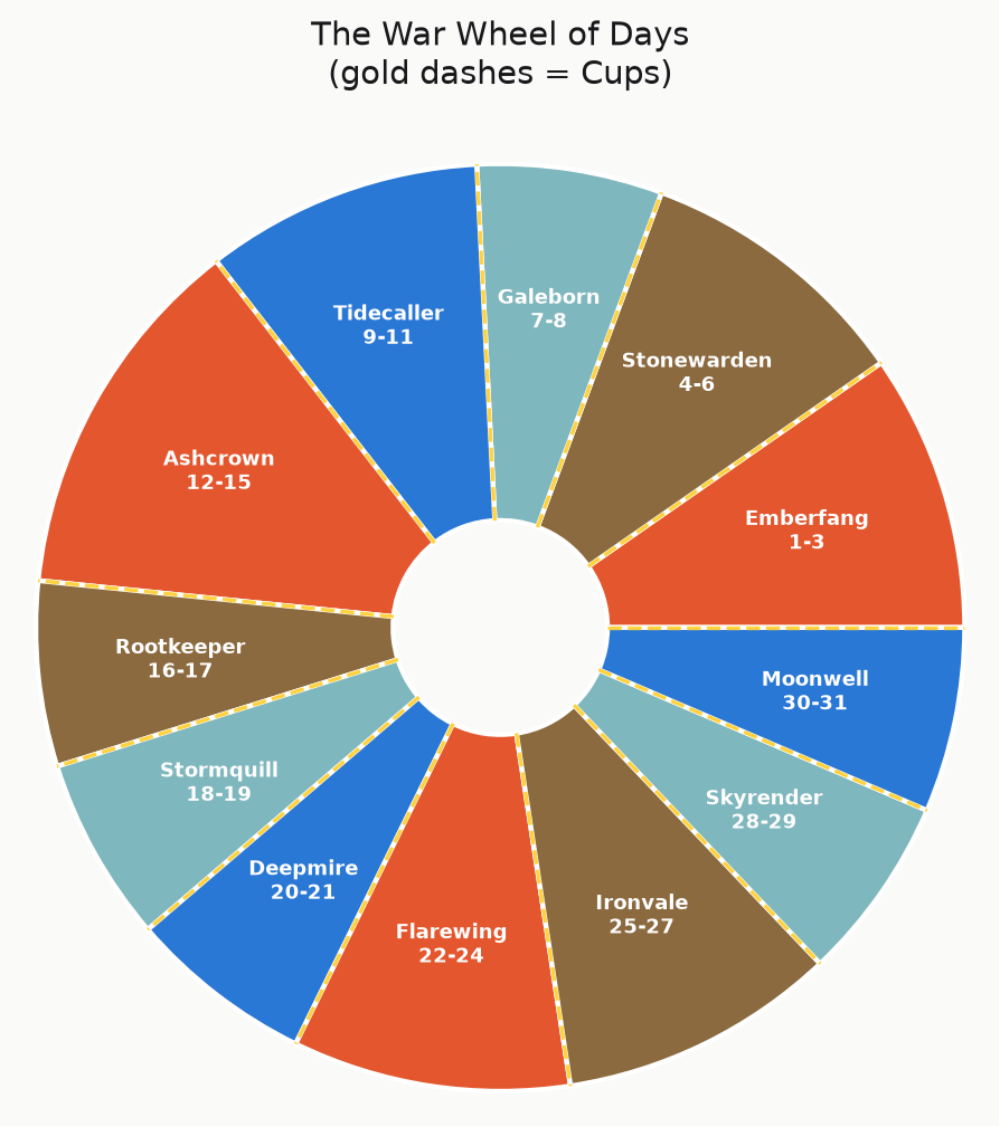

Numerology traces itself to Pythagoras, who taught that all things are number and who also, reportedly, refused to eat beans. The Codex keeps the first idea and the beans. Numerologists add your letters until a single digit remains. The Codex finds this wasteful. Why shrink your soul to one digit when you can spread it across twenty-three ranks and show the working?

Feature	Classical Astrology	Pythagorean Numerology	The Got-ursix Codex
Unit of fate	Month and sun position	Letters of the name	Day of the month, plus name, plus age
Number of categories	12 signs	9 numbers (plus masters)	12 War Signs, 23 Star Ranks, 7 Life Stages
Transition zones	Cusps	None	**Cups** (never, ever cusps)
Changes with age?	No	No	Yes, every birthday
Shows the math?	Rarely	Sometimes	Always, aggressively
Honest about being fiction?	Varies	Varies	Chapter 14, in bold

The pun department reports: astrologers have houses; the Codex has barracks. Numerologists have life paths; the Codex has supply lines. Mystics read tea leaves; the Col reads the tea, then drinks it, because waste is a court-martial offence. And where Pythagoras had a theorem, the Col has a theory, which is a theorem that skipped basic training.

4. The Twelve War Signs

Here is the heart of the system. Your War Sign is set by the **day of the month** you were born, and the same days count in every month. Born April 15? Ashcrown. Born November 15? Also Ashcrown. The month is not ignored; it has a different job (it raises your Banner). This makes the Codex the only fate system in which your sign can be determined from a utility bill.

Sign	Days	Element	Personality	Pros	Cons	Best Allies	Hardest Match
Emberfang	1-3	Fire	Bold, first in line, lights the fire	Courage, momentum	Impatient, burns bridges for warmth	Galeborn, Stormquill, Skyrender	Tidecaller

Sign	Days	Element	Personality	Pros	Cons	Best Allies	Hardest Match
Stonewarden	4-6	Earth	Steady, loyal, holds the wall	Reliable, enduring	Stubborn, allergic to change	Tidecaller, Deepmire, Moonwell	Galeborn
Galeborn	7-8	Wind	Quick, curious, rested on the 7th day and won't stop mentioning it	Witty, adaptable	Scattered, gone with the breeze	Emberfang, Ashcrown, Flarewing	Stonewarden
Tidecaller	9-11	Water	Intuitive, calm, reads the room	Empathy, patience	Moody, grudges come in like tides	Stonewarden, Rootkeeper, Ironvale	Emberfang
Ashcrown	12-15	Fire	Regal flame; keeper of the Ashen Oath (Apr 15)	Leadership, conviction	Pride, crowns itself early	Galeborn, Stormquill, Skyrender	Deepmire
Rootkeeper	16-17	Earth	Grounded planner, grows things slowly	Patience, provision	Overcautious, hoards snacks	Tidecaller, Deepmire, Moonwell	Stormquill
Stormquill	18-19	Wind	Writer of orders, sharp tongue	Eloquence, speed	Restless, argues with weather	Emberfang, Ashcrown, Flarewing	Rootkeeper
Deepmire	20-21	Water	Deep thinker, keeper of secrets	Insight, loyalty	Brooding, hard to read	Stonewarden, Rootkeeper, Ironvale	Ashcrown
Flarewing	22-24	Fire	Showman, rallies the camp	Charisma, daring	Reckless, loves applause	Galeborn, Stormquill, Skyrender	Moonwell
Ironvale	25-27	Earth	Builder and blacksmith of plans	Discipline, craft	Rigid, rusts when idle	Tidecaller, Deepmire, Moonwell	Skyrender
Skyrender	28-29	Wind	Visionary scout, sees over hills	Vision, freedom	Unanchored, misses dinner	Emberfang, Ashcrown, Flarewing	Ironvale
Moonwell	30-31	Water	Mystic of month's end	Wisdom, renewal	Wistful, rare	Stonewarden, Rootkeeper, Ironvale	Flarewing

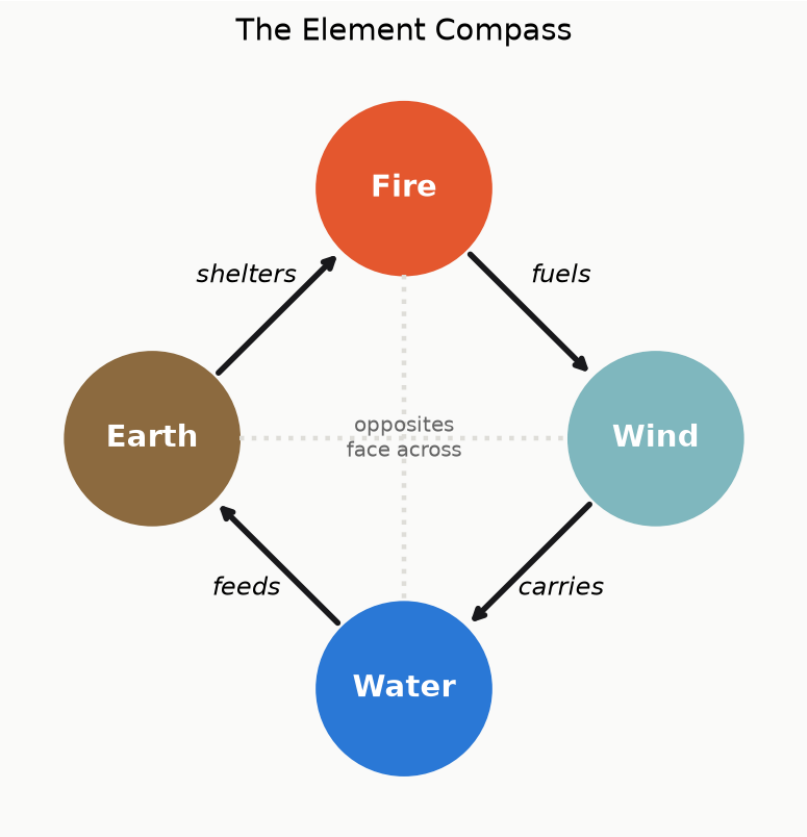

The Twelve Banners

Your birth month raises one of twelve war Banners, such as the Banner of the Frozen March. A Banner flavours your sign the way a flag flavours a parade. An Emberfang under the Banner of the Frozen March is a fire that starts in the cold, which explains why they are always the one who brought matches.

Over-explanation corner: twelve signs across thirty-one days means unequal signs, two to four days each. Critics call this unfair. The Codex calls it realistic: armies were never equal in size, and neither are months. Most Februaries contain no Moonwell at all. Moonwell considers this a February problem.

5. The Element Compass and the Polar Opposites

Four elements rotate through the twelve signs in fixed order, Fire, Earth, Wind, Water, three full laps. They relate by a circle of service:

Rule	Meaning	Field Example
Fire fuels Wind	Heat lifts the air	Emberfang's plan gives Galeborn something to talk about
Wind carries Water	Air moves the rain	Stormquill delivers Tidecaller's feelings, by memo
Water feeds Earth	Rain grows the field	Deepmire's ideas become Ironvale's buildings
Earth shelters Fire	Stone holds the hearth	Rootkeeper keeps Flarewing from lighting the tent

Polar Opposites

Across the compass, Fire faces Water and Earth faces Wind. Each sign has one exact opposite: the person whose strengths fill your gaps and whose flaws are yours in a mirror, wearing a different hat.

Sign	Opposite	What they give you	What they show you
Emberfang	Tidecaller	Patience	Your temper, reflected as sulking
Stonewarden	Galeborn	Flexibility	Your stubbornness, as flightiness
Ashcrown	Deepmire	Depth	Your pride, as secrecy

Sign	Opposite	What they give you	What they show you
Rootkeeper	Stormquill	Speed	Your caution, as restlessness
Flarewing	Moonwell	Stillness	Your showmanship, as wistfulness
Ironvale	Skyrender	Vision	Your rigidity, as drifting

Irony of the chapter: opposites are each other's hardest match and greatest teacher. The Codex sees no contradiction. So is every sibling.

6. The Cups: Where Two Signs Mesh

The old astrologers spoke of cusps. The Codex has **Cups**, with a u, like the thing you drink from. Precisely defined: **a Cup is the last day of a sign, the day before the change**, when two camps share one fire and the signs mesh. On those nights the camps passed one cup around the fire, and nobody wanted to be the one who spilled it.

Cup Day	Home Sign	Meshes With	Note
3	Emberfang	Stonewarden	Fire on stone
6	Stonewarden	Galeborn	The wall gets a window
8	Galeborn	Tidecaller	Wind over water
11	Tidecaller	Ashcrown	Steam, and drama
15	Ashcrown	Rootkeeper	Holds the Ashen Oath, Apr 15; stays Fire
17	Rootkeeper	Stormquill	Roots that write letters
19	Stormquill	Deepmire	Storm on the deep
21	Deepmire	Flarewing	Secrets set alight
24	Flarewing	Ironvale	The forge is lit
27	Ironvale	Skyrender	The tower is built
29	Skyrender	Moonwell	Wind into moonlight
Last day	Final sign	Emberfang	The **Grand Cup**: the month pours back to the start

Rules of the Cup: your home sign never changes. A Cup-born picks up the next sign's gift: one extra pro, one extra con, and that sign's allies as friends. You do not become two signs; you become one sign with a very good neighbour. The Grand Cup moves with the month's length (the 28th in an ordinary February), making it the only Cup that requires a calendar, which the Col considers the most military thing about it.

7. Star Rank: The Arithmetic of Destiny

Most systems hide the sum. The Codex prints it on your reading and dares you to check it. Star Rank runs from 1 (Recruit) to 23 (Cosmic Sovereign):

> ***Name Weight*** *= sum of (each letter's alphabet place × its position in the name)*
> ***Birth Weight*** *= day × 31 + month × 12 + last two digits of year*
> ***Star Rank*** *= ((Name Weight + Birth Weight + Age + 23) mod 23) + 1*

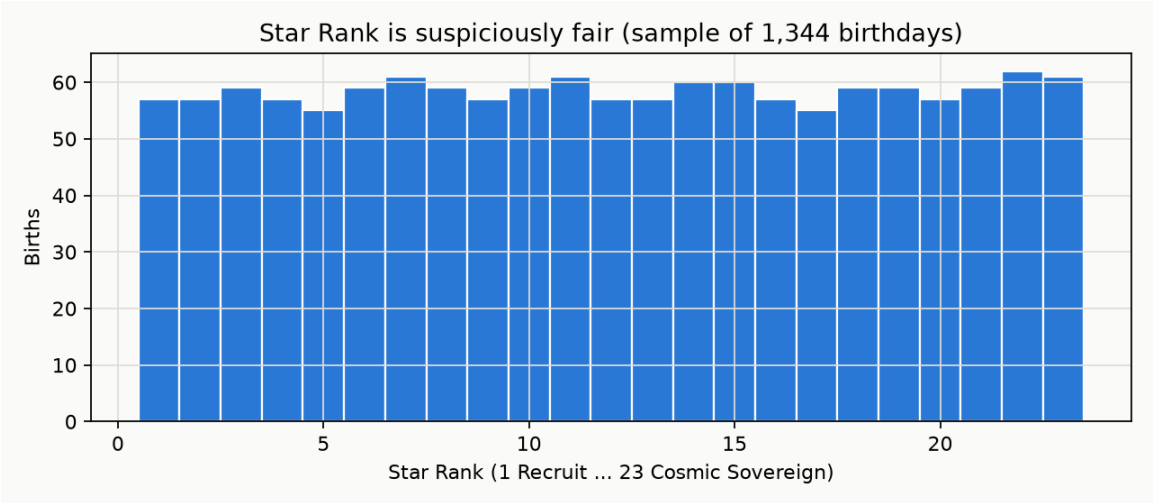

A Worked Example, Explained Far Beyond Necessity

A recruit named **LEON**, born April 15, 1960, consulted in October 2026 (age 66):

Letter	Alphabet place	Position	Product
L	12	1	12
E	5	2	10
O	15	3	45
N	14	4	56
		Name Weight	**123**

Birth Weight = 15×31 + 4×12 + 60 = 465 + 48 + 60 = **573**. Add age 66 and the sacred 23: 123 + 573 + 66 + 23 = **785**. 785 divided by 23 is 34 remainder 3 (23 × 34 = 782). Add 1. Star Rank: **4**. Our recruit is also an Ashcrown, born on a Cup and on the Ashen Oath, which the Col describes as "a lot of paperwork for one birthday."

Why multiply letters by position? Because order matters: an L at the front is a leader; an L at the back is the rear guard. Why 31 and 12? Because there are at most 31 days and exactly 12 months, so the weights keep dates from colliding. Why 23? See Chapter 12, and bring snacks.

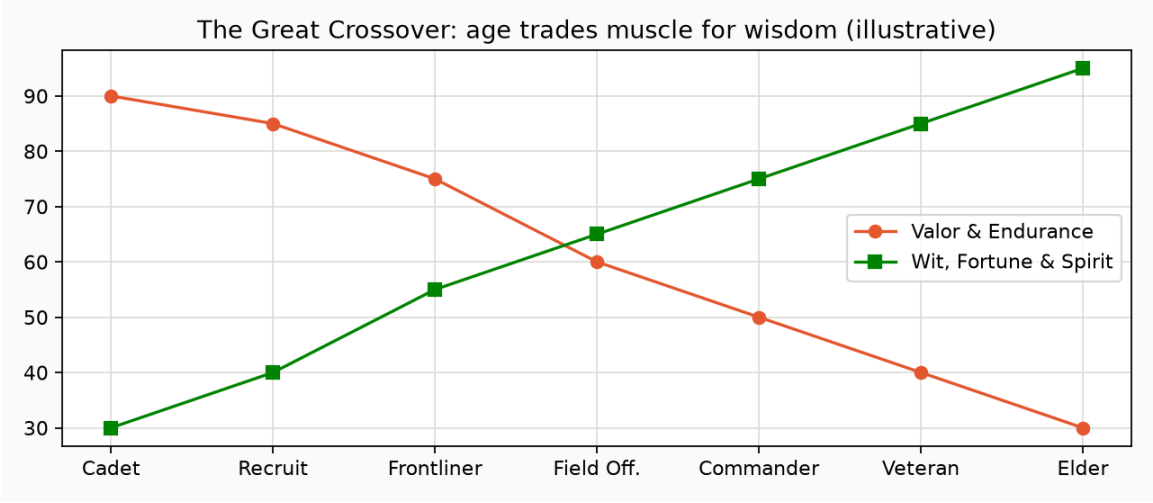

Statistical irony: because of modular arithmetic, Star Ranks fall almost evenly across the population. Destiny, it turns out, is very fair and suspiciously good at long division.

8. Age Matters: The Seven Life Stages

The ancient arts assign you a sign at birth and never update the software. The Codex is a living document: age is added into Star Rank, so **your rank changes on every birthday**, and age places you in one of seven Life Stages.

Stage	Ages	Emphasis	Codex Motto
Cadet	Under 13	Valor, Endurance	Is it lunch yet?
Recruit	13-19	Valor, Endurance	Nobody understands me, sir.
Frontliner	20-29	Valor, Endurance	Hold the line, then the rent.
Field Officer	30-44	Balanced	I made a spreadsheet for that.
Commander	45-59	Wit, Fortune	Back in my day, the stars were closer.
Veteran	60-74	Wit, Fortune, Spirit	I've seen this war before.
Elder of the Stars	75+	Wit, Spirit	The stars call me for advice.

The **Capability Calculator** scores Valor, Wit, Endurance, Fortune and Spirit from 0 to 100 (total 500). Younger stages lean to Valor and Endurance; older stages to Wit, Fortune and Spirit. This is called the Great Crossover, and it is the most scientifically accurate thing in this book, as anyone who has tried to sprint after forty can confirm.

How Will I Go? The Codex's famous (and labelled-as-a-joke) simulator always grants a grand old age between 80 and 112, and always older than you are today. An 85-year-old will never be told they "live to 82." The Col considers that rude, and also mathematically awkward.

9. Holy Days, Fated Days and Trickster Dates

The calendar of the Codex is layered like a field ration: fixed days, moving days, and days that lie to you.

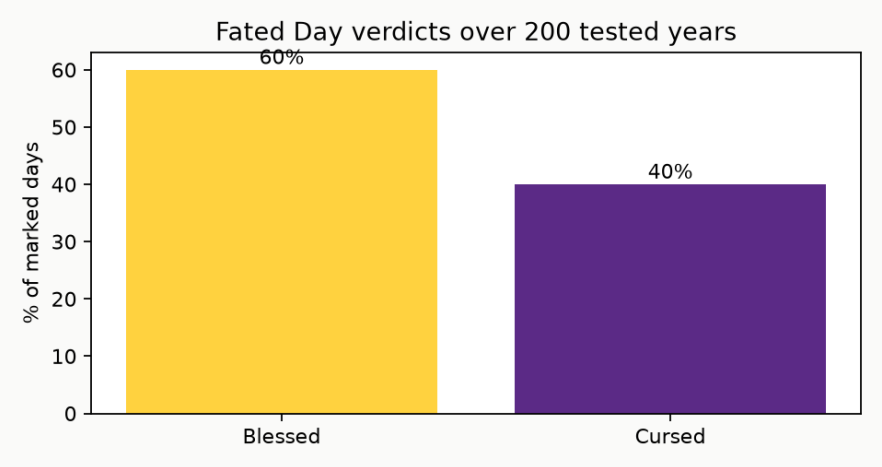

The War Holy Days (fixed every year)

Date	Name	Meaning
Jan 1	First Dawn Muster	The camps assemble; resolutions are issued as orders
Apr 15	The Ashen Oath	Ashcrown's day of Fire; oaths made today are binding (taxes agree)
Jun 23	Night of the Twenty-Three	Honours the sacred number; 23 salutes, 22 apologies
Oct 31	Lantern Watch	The camps light lanterns against the long night
Nov 11	The Old Soldiers' Salute	Remembrance of all who held the line

Irony noted: April 15 is both the Ashen Oath and, in the United States, Tax Day. The Codex insists this is coincidence. The Codex is also the only system honest enough to admit it is a coincidence.

The Fated Days (one per month, moving yearly)

Every month has exactly one Fated Day. Its date shifts every year by formula, it never lands on a Holy Day, and each year's formula declares every marked day **Blessed** or **Cursed**. The Ashen Oath itself was Blessed in 2025, Cursed in 2026, and returns to Blessed in 2027. Cursed years are when the Oath is tested; Blessed years are when it pays out.

Across 200 tested years about 60% of marked days come out Blessed and 40% Cursed, so curses stay rare enough to feel important. The Fated Days Almanac on leonlink.net/moons.html lets any visitor type a year and see its full list.

The Trickster Dates

One more moving day per month, the Trickster Date, never on a Holy Day or Fated Day. Tricksters are neither blessed nor cursed; they are *unreliable*. Plans made on a Trickster Date tend to come out sideways. The Col recommends against signing contracts, cutting your own hair, or replying-all.

10. Guiding Stars, Patron Heroes and Hidden Mechanics

The Seven Guiding Stars

Your name and birthday select one of seven Guiding Stars, among them **Varkas the Red Lantern**, who lights the road for the stubborn, and **Halcyra**, the calm star that sailors and accountants pray to. Seven was chosen because it is the most popular number in every ancient art, and the Codex believes in meeting the customer where they are.

The Patron Heroes

Each of the twelve signs has a Patron Hero from the Chronicle: the soldier who first held that camp's days. Their battle stories are told on the site; their job in your profile is to remind you that someone of your sign has been brave before, and probably also late.

The Hidden Mechanics

Mechanic	How it works	What it means
Echo Number	A year-digit in each decade drawn from your numbers	The year in every decade when your luck repeats
Shadow Rank	24 minus your Star Rank	The rank your opposite would hold; LEON's Shadow Rank is 20
Wildcard	Triggers on rare patterns, e.g. born on the 23rd, or day equals month	The Col doubles every outcome, good and bad

These mechanics exist for one reason: depth. Every system worth arguing about has a layer most people never reach. The Codex put its layer in a table, which is the opposite of hidden, and that is our favourite irony.

11. Success, Failure and the Profile Card

Every calculation thrown into the labyrinth returns a **Codex Profile**: personality, pros, cons, three best allies, hardest match, your sign's legend, your marked-day status, your polar opposite, Guiding Star, Patron Hero and hidden mechanics. It also returns the two lines everyone actually reads first:

Element	Most likely to succeed at	Most likely to fail at
Fire	Starting a business or project	Waiting rooms and slow paperwork
Earth	Building something that lasts	Surprise parties, spontaneous road trips
Wind	Talking their way into a room	Finishing what they started talking about
Water	Reading people and calming a crisis	Letting things go, especially group chats

The lines are then sharpened by your strongest and weakest Capability stat. A Fire sign strong in Valor is most likely to succeed at starting something "where Valor counts." A Fire sign weak in Endurance is warned, gently, about marathons, and lifetime phone contracts.

12. The Theories (Peer-Reviewed by One Cat)

Why the Day Sets Your Sign

Months were named by emperors with egos (July, August). Days were named by nobody, numbered honestly from one. The Codex trusts the humble number.

Why the Formula Adds 23

Twenty-three is prime and therefore cannot be divided, bribed or reorganised. It also equals the number of times the Col has been told to "stop adding 23" this year.

Why Age Matters

A sign that never changes is a statue. The Codex prefers soldiers, who get promoted, demoted and occasionally wiser.

The Theory of Unequal Camps

Unequal sign lengths mirror the Chronicle: Ashcrown took four days by force; Galeborn took two and called it efficiency.

The Theory of the Shared Cup

Transition days are not confusion but hospitality: the outgoing sign pours, the incoming sign drinks. Spilling counts as a Trickster event.

The Theory of Blessed Imbalance

Sixty-forty, not fifty-fifty, because a world with as many curses as blessings would not keep a fortune teller in business.

Peer review: each theory was read aloud to the Codex's senior reviewer, a cat, who knocked a pen off the desk after the third theory and fell asleep during the sixth. We have interpreted this as approval and silence respectively.

13. Field Notes from the LeonLink Front

• The Codex was tested on 12 imaginary armies and one cat. The cat demands royalties.

• If your reading says you will meet a tall stranger, salute your toaster. It is closer, and it is warm.

• Col Got-ursix accepts no refunds, only salutes. Glow coins spent on Ask the Col (5 Glow a question) are non-returnable; wisdom is final sale.

• Should two Ashcrowns marry, the Col recommends separate thermostats.

• A Moonwell in February is like a lifeguard in the desert: technically present in the manual.

• Mushroom Madness, the site's chat companion, has read all 53 books in the LeonLink library and still cannot explain Cups better than this chapter. Few can.

• Our numerologist reduced this whole book to a single digit. It was 7. Of course it was 7.

> *Visit leonlink.net/moons.html for live readings, the Almanac, the chart and the Shop, and remember: the stars are free, but the Glow is currency.*

The Edits of the Edits

Second Printing - Revised Field Edition, Oct 26, 2026

Every true ancient text has been revised by someone who swears they changed nothing. This one has been revised by someone who admits he changed everything. Below is the official record of the Codex's edits, kept by Pip, as the Col's orders came in from the front.

Edit	What the Col changed	Editor's note
No. 1	April 15 moved into Fire (Ashcrown, days 12-15)	Taxes were always going to be Fire.
No. 2	Age joined the Star Rank formula	Rank now shifts each birthday. Aging: finally useful.
No. 3	Profiles: traits, pros, cons, allies, hardest match	The Col insisted on cons. For you, not him.
No. 4	Holy Days and yearly Blessed/Cursed Fated Days	Apr 15, 2026: Cursed. Apr 15, 2027: forgiven.
No. 5	Cups (not cusps) on the day before a sign change	Spell-check lost this battle.
No. 6	Trickster Dates, opposites, stars, heroes, hidden mechanics	Hidden mechanics now documented, so no longer hidden.
No. 7	This page	An edit about edits, made for the sake of editing.

Editorial policy: The Codex is never wrong. It is simply edited until it was always right. Future edits will be announced on leonlink.net and immediately treated as ancient.

- Pip, Keeper of the Record (and the red pen)

14. The Last Book: Disclaimer and Truths

Recruit, stand to attention for the most important chapter. Every good fortune teller owes you one honest page. Here is ours.

The Disclaimer

The Got-ursix Codex is fiction. It was invented in 2026 for LeonLink's Moons & Cauldrons as entertainment. Its War Signs, Cups, Star Ranks, Holy Days, Fated Days, Trickster Dates, Guiding Stars, Heroes and hidden mechanics are made up. The Chronicle of the Ancient Wars is folklore written for the site. The formulas are real arithmetic, and that is the only real thing about them: they produce consistent results, not true ones.

Do not make medical, financial, legal, romantic or life decisions from a Codex reading. The "How Will I Go?" simulator predicts nothing about anyone's life or death. If a reading worries you, it is a joke that landed badly, and we apologise. The Codex is not affiliated with any religion, and its playful use of scripture and of astrology and numerology is meant as homage and humour, not doctrine.

The Truths

Truth one: no study has ever shown that the date of your birth decides your personality. Not the zodiac, not numerology, not the Codex. Astrology has been tested repeatedly, and it performs no better than chance.

Truth two: the feeling that a reading "describes you exactly" has a name: the Barnum effect. Statements like "you are loyal but need your space" fit nearly everyone. The Codex used this effect on purpose throughout this book, and now it is telling you, which is the least mystical thing a mystic has ever done.

Truth three: you are not your sign. Your courage, your patience, your bad jokes and your good ones belong to you, built by choices, by people who loved you, and, if you believe as the opening chapter does, by a Maker who made the stars for seasons and glory rather than for bossing you around.

Truth four: the real value of a system like this is the same as any good game. It starts conversations. It makes you laugh with a friend over who got Cursed this year. It gives you a reason to think about your strengths and weaknesses for five minutes. That is plenty.

> *So read your Codex. Compare ranks. Argue about Cups. Light a lantern on October 31 and salute on November 11. Then close the book and go do something your stars never predicted.*
>
> **Dismissed.**
